No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
```

RESULT 4 US-09-643-990A-1/c . Sequence 1, Application US/09643990A

```
Patent No. 6605709
Sequence 1519, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
APPLICANT: GARY BRETON
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: US/09/543,681A
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT PILING DATE: 2000-04-05
PRIOR PILING DATE: 1999-04-09
FRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 1519
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Sequence 41, Application US/10204708

Patent No. 6677731

GENERAL INFORMATION:

APPLICANT: PIEPENBROCK, Christian

APPLICANT: PIEPENBROCK, Christian

APPLICANT: PIEPENBROCK, Christian

APPLICANT: BERLIN, Kurt

ITILE OF INVENTION: Dy Assessing DNA Methylation

FILE REPERENCE: 5013-1012

CURRENT APPLICATION NUMBER: US/10/204,708

CURRENT PILING DATE: 2003-05-06

PRIOR APPLICATION NUMBER: DE 10019058.8

PRIOR FILING DATE: 2000-04-06

PRIOR APPLICATION NUMBER: DE 10019058.8

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

Sequence 9, Application US/08472028A
Patent No. 5767373
GENERAL INFORMATION:
APPLICANT: Ward, Exic R
APPLICANT: Volrath, Sandra
TITLE OF INVENTION: Manipulation of Protoporphyrinogen
TITLE OF INVENTION: Oxidase Enzyme Activity in Bukaryotic Organisms
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:

1 Sequence 1, Application US/08545528D

1 Patent No. 653773

2 GENERAL INFORMATION:

3 APPLICANT: Fraser et al.

1 TILE OF INVENTION: Nucleotide Sequence of the Mycoplasma Genitalium Genome, Fragmen

2 Patent No. 6537773

3 TILE OF INVENTION: Thereof, and Uses Thereof

FILE REFERENCE: PB193P1

3 CURRENT APPLICATION NUMBER: US/08/545,528D

5 CURRENT PILING DATE: 1995-10-19

This clone is from an A. gambiae BAC library (ND-TAM) provided by
P.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PRST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixer ost larvae. The BAC
library was constructed at Texas AkM University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
partial digest.

                                                                                                                                                                                     /nce="Vector: pBluescript II SK-; Site I: BCORI; Site 2:
XhOI; This library, constructed by John Davies and Jeffrey
McDermott, combines cDMAs from CC-1690 cells grown to
mid-log phase in TAPP (accetace-containing) medium in the
light, TAP medium in the dark, HS (minimal) medium in a
ambient levels of CO2 and HS medium bubbled with 5% CO2.
POLYA mRNA was purified from each sample, pooled and cDNA
synthesized. The cDNA was directionally cloned and cDNA
ZAP II (Stratagene) in the BCORI (5') and XhOI (3') sites.
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with Exabsist (Stratagene)
phase. The library was normalized using method 4 described
in Bonaldo et al (1996) Genome Research 6: 791-806.*

This clone is from an A. gambiae BAC library (ND-TAM) provided by
This clone is from an A. gambiae BAC library efor enomic Research
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&W University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anopheles.

This clone is from an A. gambiae BAC library (ND-TAM) provided by
This clone is from an A. gambiae BAC library was generated from A. gambiae PBST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&M University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
partial digest.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBFH (Centre of "Etude du Polymorphisme Humanin) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microdganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&W Universty BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 973 bp DNA linear GSS 19-MAY-2003 PUTAG97TD ZM 0.6 1.0 KB Zea mays genomic clone ZMWBTa414P0S, CC419273
